7/8/70

Howard (Dick, Paul, Gary),

The photoshop got a bit confused when the jobs I left there, so I have two composites of 399 for attachment to the complaint, instead of one, and one enlargement of FBI Ex 60, instead of two. However, I also do have 4x5 Speed Graphic negatives of both, if anyone wants to print his own from them.

The 399 shots are side views differing by 90 degrees, for use in the spectro case.

The FBI 60 enlargement, which was supposed to be of the damage area alone, 8x10, is of that size but of aproximately (not quite) the entire small print I have. Further enlargement is more than possible from this negative. However, examination of the enlargement reveals nothing new to me.

It does persuade me, however, that comparison between it and the print I've examined but been refused a copy of at the Archives is more important than I had earlier thought. There are, I am pretty certain, significant differences. And in some ways the Archives print discloses more and gives an entirely different impression. As things now are, I plan to make another examination when I am again in DC and have the time.

Sincerely
